SGW are a firm of internationally acclaimed security consultants, providing professional services for the built environment. Our Security Surveying, Assessment & Projects course is delivered by qualified security professionals who have many years of experience in security assessment, design and engineering, having represented both consulting and system integration businesses in careers spanning in excess of 30 years.

Delegates will learn from project based consulting and security engineering experiences of SGW's security professionals, who hold highly recognised Security credentials, which include; Chartered Security Professional (CSyP), ASIS Physical Security Professional (PSP), ASIS Certified Protection Professional (CPP) and/or Master's Degree's in Security Related Disciplines. The 3 day course will cover the following syllabus;

Module 1

Assets, Threats, Vulnerability, and Risk ('delegates will learn how to prepare an annotated drawing to articulate project specific design based threats')

Module 2

Physical Security Assessment / The security survey ('delegates will undertake and present a security survey')

Module 3

Developing the Operational Requirement ('delegates will learn how to develop an Operational Requirement—Level 1 & 2')

Module 4

Systems design and development ('Delegates will exit the course with an understanding of the various stages of security design, from concept to construction and software techniques available which help security professionals prepare high quality deliverables')

Module 5

Preparing a successful tender package ('Delegates will learn how to prepare security tender package components')

Module 6

Contractor Selection ('Delegates will review examples of tender returns and prepare a set of key performance indicators (KPI's) for contractor selection')

Module 7

Managing a security project ('Delegates will review project control and management techniques and will exit the course having completed a project highlight report' for client submission')

Module 8

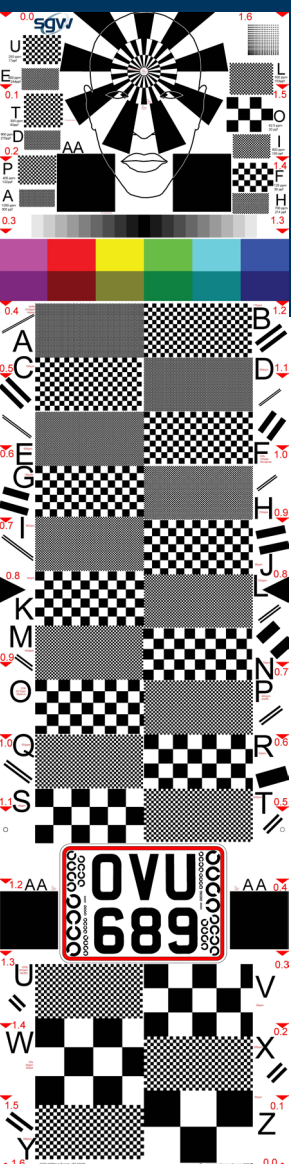

Systems performance & compliance testing ('Includes Video Surveillance Field of View Assessment To IEC 62676 standard') - ('Delegates will learn how to use a video surveillance system field of view assessment system and analysis S/w')

Module 9

Successful maintenance regimes ('delegates will exit the course with an ability to determine maintenance regime KPI's and contract management techniques')

Module 10

Preparing for the ASIS Physical Security Professional (PSP) exam ('Delegates will exit the course with a self study plan, timeline and reading material list, for progression and scheduling of the ASIS Physical Security Professional (PSP) exam. An optional one to one mentor programme is available from SGW after this course is completed, for an additional fee').
